Comment-2 isoforms, 1/p28 (shown here) and 2/p25, are produced
by alternative initiation at Met-0 and Met-26;
TISSUE SPECIFICITY: Mainly expressed in immune system. Highly
expressed in sphen and thymus and expressed at intermediate
levels in lung. Not expressed in liver, heart and brain. Isoform is predominant in lung and spleen, while isoform 2 is predominant
                                                                                                                                                                                      receptor (TCR) signaling. Inhibits T-cell antigen-receptor induced activation of nuclear factor of activated T-cells. May act by linking signaling proteins such as ZAP70 with CBL, leading to a CBL dependent degradation of signaling proteins.

-!- SUBUNIT: Interacts with phosphorylated CBL via its C-terminal domain. Interacts with phosphorylated proteins ZAP70 and CD3Z via
                                                                                                                                   õ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Yuan Z., Zavolan M., Zhu Y., Zinmer A., Carninci P., Hayatsu N., Hirozane-Kishikawa T., Konno H., Nakamura M., Sakazume N., Sato K., Shiraki T., Waki K., Kawai J., Aizawa K., Arakawa T., Pukuda S., Hara A., Hashizume W., Indiawa K., Ishii Y., Itoh M., Kagawa I., Miyazaki A., Sakai K., Sasaki D., Shibata K., Shinagawa A., Yasunishi A., Yoshino M., Waterston R., Lander E.S., Rogers J., Birney E., Hayashizaki Y., Waterston R., Lander E.S., Rogers J., Birney E., Hayashizaki Y., Marasinishi A., Yoshino M., Waterston R., Lander E.S., Rogers J., Birney E., Hayashizaki Y., Sasaki W., Sasaki Y., Shibata K., Lander E.S., Rogers J., Birney E., Hayashizaki Y., Waterston R., Lander E.S., Rogers J., Birney E., Hayashizaki Y., Materston R., Lander E.S., Rogers J., Birney E., Hayashizaki Y., Waterston R., Lander E.S., Rogers J., Mature 420:563:573 (2002).

DOWAIN: The C-terminal domain is essential for the homodimerization and the interaction with CBL. While the homodimerization and the interaction with CBL is apparently mediated via the hydrophobic region of this domain, the highly charged region is apparently required for the homodimerization (By similarity).

FYM: Phosphorylated (By similarity).

SIMILARITY: Contains 1 SH2 domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Eukaryota, Metazoa, Chordata, Craniata, Vertebrata, Buteleostomi,

Induced activation of positive selection and mitcsis of T-cells.
May act by linking signaling proteins such as ZAP70 with CBL.
Induced activation of positive selection of signaling proteins.
Induced activation and interaction with phosphorylated CBL.
Int. Homodimerization and interaction with phosphorylated CBL.
Cocurs via its C-terminal domain (By similarity). Interacts with PDGFRB and BPHA2. Interacts with phosphorylated proteins ZAP70,
CD32; VAVI and LCP2 via its SH2 domain.

ISSUB SPECIFICITY: Predominantly expressed in lymphoid tissues.
Higly expressed in spleen, thymus and lymph nodes. Weakly
expressed in lung and brain. Expressed in I-cells and at low level
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             DEVELOPMENTAL STAGE: Expressed during thymocyte maturation. Weakly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Manes G., Bello P., Roche S.; "Stap negatively regulates Strong function but does not revert "Stap negatively regulates Strong Stable and Cell morphology changes."; Mol. Cell. Biol. 20:3396-3406(2000).

Weakly verpressed in heart, adult brain, placenta, liver, skeletal muscle, kidney and pancreas.

INDUCTION: By all-trans retinoic acid (ATRA). Induction is indirect and is mediated through other proteins.

DOMAIN: The C-terminal domain is essential for the homodimerization and the interaction and the interaction and the interaction with CBL is apparently mediated via the hydrophobic region of this domain, the highly charged region is apparently required for the homodimerization.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        SUBCELLULAR LOCATION: Cytoplasmic; colocalizes with endosomes (By

                                                                                                                                                                                                        SÜBCELLULÄR LÖCATION: Isoform p60-HCK and isoform p59-HCK are associated with membranes, Isoform p60-HCK is also cytoplasmic
                                                                                                                                                                                                                                                                         similarity).
ALTERNATIVE PRODUCTS:
Event-Alternative initiation;
Comment=2 isoforms, p60-HCK (shown here) and p59-HCK, are
produced by alternative initiation;
TISSUE SPECIFICITY: Expressed predominantly in cells of the
myeloid and b-lymphoid lineages.
SIMILARITY: Belongs to the Tyr family of protein kinases. SRC
FUNCTION: May serve as part of a signaling pathway coupling th receptor to the activation of the respiratory burst. May also contribute to neutrophil migration and may regulate the degranulation process of neutrophils.

CATALYTIC ACTIVITY: ATP + a protein tyrosine = ADP + protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              R PDB; 5HCK; 17-UXN-29.

-!- FUNCTION: May serve as part of a signaling pathway coupling the left receptor to the activation of the respiratory burst. May also contribute to neutrophil migration and may regulate the degranulation process of neutrophils (By similarity).

-!- CATALYTIC ACTIVITY: ATP + a protein tyrosine = ADP + protein

    -!- SUBCELLULĀR LOCATION: Membrane-associated (By similarity).
    -!- SIMILARITY: Belongs to the Tyr family of protein kinases. SRC

-!- FUNCTION: May function in a signal transduction pathway that is restricted to B lymphoid cells.
-!- CATALYTIC ACTIVITY: ATP + a protein tyrosine = ADP + protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   MEDINE-95123078; PubMed=7822795; Islam K.B., Rabbani H., Larsson C., Sanders R., Smith C.I.; Islam K.B., Rabbani H., Larsson C., Sanders R., Smith C.I.; Moblecular cloning, characterization, and chromosomal localization of a human lymphoid tyrosine Kinase related to murine Blk."; J.                                                                                                                                                                                                                                                                                             N-myristoyl glycine (By similarity).
PHOSPHORYLATION (AUTO-) (BY SIMILARITY)
tyrosine phosphate.
-!- SIMILARITY: Belongs to the Tyr family of protein kinases. SRC
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             BLK HUMAN STANDARD; PRT; 504 AA.

-!- SUBCELLULAR LOCATION: Isoform p59-HCK and isoform p56-HCK are associated with membranes. Isoform p59-HCK is also cytoplasmic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 -!- ALTERNATIVE PRODUCTS:

Bvent=Alternative initiation;

Comment=2 isoforms, p59-HCK (shown here) and p56-HCK, are produced by alternative initiation;
-!- TISSUE SPECIFICITY: Expressed predominantly in cells of the myeloid and b-lymphoid lineages.
-!- SIMILARITY: Belongs to the Tyr family of protein kinases. SRC

In the stricted to B. Lymphoid cells.
I CHALLYTIC ACTIVITY: ATP + a protein tyrosine = ADP + protein tyrosine phosphate.
I SIMILARITY: Belongs to the Tyr family of protein kinases. SRC
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            MEDINE=90117147; PubMed=2404338;

SUBUNT: Binds to phosphatidylinositol 3'-kinase (PI3K) from T lymphocytes through its SH3 domain and to the tyrosine phosphorylated form of KHDRBS1/P70 through its SH2 domain.
SUBCELLULAR LOCATION: BOUND TO THE CYTOPLASMIC DOMAIN OF EITHER

    FUNCTION: May participate in antigen-induced T-cell activation.
    CATALYTIC ACTIVITY: ATP + a protein tyrosine = ADP + protein

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             X-RAY CRYSTALLOGRAPHY (1.0 ANGSTROMS) OF 121-225.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 16,
